Have low-level math students? This free learning opportunity may help!

The following e-mail was sent to all program directors.

Help your low-level students master the building blocks of math!

Do you have low-level math students who struggle with mathematical fluency and the conceptual understanding of the College and Career Readiness Standards?

If so, consider this free Professional Learning Opportunity being offered by the Kentucky Department of Education. This six-hour online learning experience will be offered in three, two-hour sessions.

Though the course is designed for KDE K-3 math teachers, adult educators may find the content applicable to the math deficiencies of their low-level students. See the attached flyer for course details.

The deadline to register is April 16, 2014 (see instructions on attached flyer). This course will not count toward KYAE's 2013-14 PD requirements for instructors.
